Job Description

A new position has become available for a software engineer with the above-mentioned abilities to assist with project related tasks as well as support tasks.

The projects require a good understanding of Microsoft Access, with the ability to help finish existing projects in VB.Net and also the newer projects written in C#.Net.

Support tasks include problem-solving techniques for hardware and network issues as well as possibly assisting in the continual development of MS Access Databases for several Clients.

The long-term success of this opportunity will be determined by the ability of the successful applicant to remain focused on results.

Remuneration

This depends on the abilities of the applicant. It is initially envisaged to start off the successful applicant on a basic retainer.

The Company

EES Computing was established in 2002. It is an owner operated business situated in Rosebank Johannesburg. The company is focused on providing good quality custom software products for several companies across Johannesburg and South Africa.

The long-term vision is to develop and sell software solutions to service industry.
